

# Product datasheet for TA369862S

# C17orf61 (TMEM256) Rabbit Polyclonal Antibody

## **Product data:**

Product Type:	Primary Antibodies
Applications:	IHC
Recommended Dilution:	IHC: 25-100 Positive control: Human thyroid cancer Predicted cell location: Cell membrane
Reactivity:	Human, Mouse
Host:	Rabbit
lsotype:	IgG
Clonality:	Polyclonal
Immunogen:	Fusion protein of human TMEM256
Formulation:	pH7.4 PBS, 0.05% NaN3, 40% Glycerol
Purification:	Antigen affinity purification
Conjugation:	Unconjugated
Storage:	Store at -20°C.
Stability:	1 year
Gene Name:	transmembrane protein 256
Database Link:	<u>Entrez Gene 254863 Human</u> O8N2U0

#### C17orf61 (TMEM256) Rabbit Polyclonal Antibody – TA369862S

Background:TMEM256, also known as C17orf61, C17orf61 (chromosome 17 open reading frame 61) is a<br/>113 amino acid protein that is encoded by a gene mapping to human chromosome 17.<br/>Chromosome 17 makes up over 2.5% of the human genome with about 81 million bases<br/>encoding over 1,200 genes. Two key tumor suppressor genes are associated with<br/>chromosome 17, namely, p53 and BRCA1. Tumor suppressor p53 is necessary for<br/>maintenance of cellular genetic integrity by moderating cell fate through DNA repair versus<br/>cell death. Malfunction or loss of p53 expression is associated with malignant cell growth and<br/>Li-Fraumeni syndrome. Like p53, BRCA1 is directly involved in DNA repair, specifically it is<br/>recognized as a genetic determinant of early onset breast cancer and predisposition to<br/>cancers of the ovary, colon, prostate gland and fallopian tubes. Chromosome 17 is also linked<br/>to neurofibromatosis, a condition characterized by neural and epidermal lesions, and<br/>dysregulated Schwann cell growth. Alexander disease, Birt-Hogg-Dube syndrome and<br/>Canavan disease are also associated with chromosome 17.

Synonyms:

C17orf61
