| Background:           | C9orf116, also known as PIERCE1. PIERCE1 is an important p53 target gene contributing to<br>normal DNA damage response and may play crucial roles in maintaining genomic integrity<br>against genotoxic stresses, including UVC irradiation. PIERCE1 exists as two alternatively<br>spliced isoforms and is predominantly expressed in human small cell lung cancer. PIERCE1<br>knockdown induces down-regulation of proapoptotic genes including Ei24, Apaf1 and PTEN,<br>suggesting that PIERCE1 is a proapoptotic gene. It is helpful for in-depth understanding of<br>p53 pathways and the design of new cancer therapies. |
