Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	WB: 1000-5000 WB positive control: 293T cell, Mouse brain tissue, Mouse testis tissue, HepG2 cell, Mouse liver tissue, A375 cell lysates IHC: 50-200 Positive control: Human tonsil Predicted cell location: Cytoplasm and Nucleus
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
lsotype:	IgG
Clonality:	Polyclonal
Immunogen:	Fusion protein of human RPL17
Formulation:	pH7.4 PBS, 0.05% NaN3, 40% Glycerol
Purification:	Antigen affinity purification
Conjugation:	Unconjugated
Storage:	Store at -20°C.
Stability:	1 year
Predicted Protein Size:	21 kDa
Gene Name:	ribosomal protein L17
Database Link:	<u>Entrez Gene 6139 Human</u> <u>P18621</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

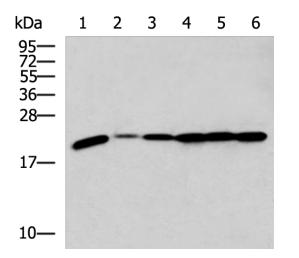

### **PORIGENE** RPL17 Rabbit Polyclonal Antibody – TA370310S

Background:Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and<br/>a large 60S subunit. Together these subunits are composed of 4 RNA species and<br/>approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is<br/>a component of the 60S subunit. The protein belongs to the L22P family of ribosomal<br/>proteins. It is located in the cytoplasm. This gene has been referred to as rpL23 because the<br/>encoded protein shares amino acid identity with ribosomal protein L23 from Halobacterium<br/>marismortui; however, its official symbol is RPL17. As is typical for genes encoding ribosomal<br/>proteins, there are multiple processed pseudogenes of this gene dispersed through the<br/>genome. Alternative splicing results in multiple transcript variants. Read-through<br/>transcription also exists between this gene and the neighboring downstream C18orf32<br/>(chromosome 18 open reading frame 32) gene.

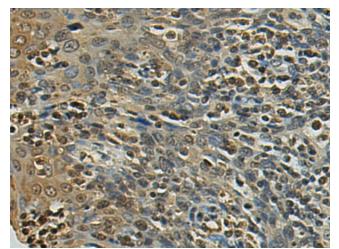

Synonyms: FLJ92089

FLJ92089; MGC117162; PD-1; rpL23
