**Background:** This gene belongs to the brain expressed X-linked gene family. The encoded protein interacts

with the transcription factor LIM domain only 2 in a DNA-binding complex that recognizes the

E-box element and promotes transcription. This gene has been found to be a tumor suppressor that is silenced in human glioma. In breast cancer cells, this gene product modulates apoptosis in response to estrogen and tamoxifen, and enhances the anti-

proliferative effect of tamoxifen. Multiple transcript variants encoding different isoforms have

been found for this gene.
