Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	
Recommended Dilution.	WB positive control: Mouse brain tissue, Mouse kidney tissue lysates IHC: 100-300 Positive control: Human tonsil Predicted cell location: Cytoplasm
Reactivity:	Human, Mouse
Host:	Rabbit
lsotype:	IgG
Clonality:	Polyclonal
Immunogen:	Fusion protein of human KRCC1
Formulation:	pH7.4 PBS, 0.05% NaN3, 40% Glycerol
Purification:	Antigen affinity purification
Conjugation:	Unconjugated
Storage:	Store at -20°C.
Stability:	1 year
Predicted Protein Size:	31 kDa
Gene Name:	lysine-rich coiled-coil 1
Database Link:	<u>Entrez Gene 51315 Human</u> <u>Q9NPI7</u>

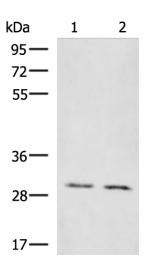

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

## **GRIGENE** KRCC1 Rabbit Polyclonal Antibody – TA370806S

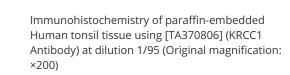

Background:KRCC1 (lysine-rich coiled-coil 1), also known as CHBP2 (cryptogenic hepatitis-binding protein<br/>2), is a 259 amino acid protein that is encoded by a gene located on human chromosome<br/>2p11.2. Consisting of 237 million bases, chromosome 2 is the second largest human<br/>chromosome and encodes over 1,400 genes. A number of genetic diseases are linked to<br/>genes on chromosome 2. Harlequin icthyosis, a rare and morbid skin deformity, is associated<br/>with mutations in the ABCA12 gene. The lipid metabolic disorder sitosterolemia is associated<br/>with ABCG5 and ABCG8. An extremely rare recessive genetic disorder, Alström syndrome, is<br/>due to mutations in the ALMS1 gene. Interestingly, chromosome 2 contains what appears to<br/>be a vestigial second centromere and vestigial telomeres which gives credence to the<br/>hypothesis that human chromosome 2 is the result of an ancient fusion of two ancestral<br/>chromosomes seen in modern form today in apes.

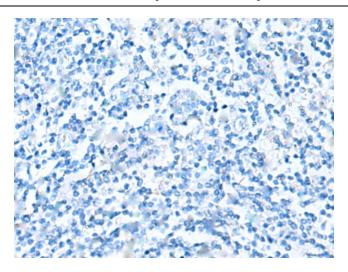

Synonyms: CHBP2; FLJ22333
