**Database Link:** Entrez Gene 25788 Human

Q9Y620

**Background:** The protein encoded by this gene belongs to the DEAD-like helicase superfamily. It shares

similarity with Saccharomyces cerevisiae RAD54 and RDH54, both of which are involved in homologous recombination and repair of DNA. This protein binds to double-stranded DNA, and displays ATPase activity in the presence of DNA. This gene is highly expressed in testis and spleen, which suggests active roles in meiotic and mitotic recombination. Homozygous

mutations of this gene were observed in primary lymphoma and colon cancer.

**Synonyms:** FSBP; RDH54
