Background: The protein encoded by this gene belongs to the ROBO family, part of the immunoglobulin

superfamily of proteins that are highly conserved from fly to human. The encoded protein is a transmembrane receptor for the slit homolog 2 protein and functions in axon guidance and cell migration. Mutations in this gene are associated with vesicoureteral reflux, characterized by the backward flow of urine from the bladder into the ureters or the kidney. Alternative

splicing results in multiple transcript variants.

Synonyms: KIAA1568; SAX3
