Gene Name:	thyroid hormone receptor interactor 11
Database Link:	Entrez Gene 9321 Human Q15643
Background:	This gene was identified based on the interaction of its protein product with thyroid hormone receptor beta. This protein is associated with the Golgi apparatus. The N-terminal region of the protein binds Golgi membranes and the C-terminal region binds the minus ends of microtubules; thus, the protein is thought to play a role in assembly and maintenance of the Golgi ribbon structure around the centrosome. Mutations in this gene cause achondrogenesis type IA.
Synonyms:	CEV14; GMAP-210; TRIP-11; Trip230
