

Product datasheet for TA371821S

H2BC11 Rabbit Polyclonal Antibody

Product data:

Host:

Product Type: Primary Antibodies IHC **Applications:** Recommended Dilution: IHC: 25-100 Positive control: Human thyroid cancer Predicted cell location: Nucleus **Reactivity:** Human Rabbit Isotype: lgG **Clonality:** Polyclonal Immunogen: Synthetic peptide of human H2BC11 Formulation: pH7.4 PBS, 0.05% NaN3, 40% Glycerol **Concentration:** lot specific Purification: Antigen affinity purification **Conjugation:** Unconjugated Store at -20°C. Storage: Stability: 1 year Gene Name: histone cluster 1, H2bj Database Link: Entrez Gene 8970 Human P06899 Background: Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Two molecules of each of the four core histones (H2A, H2B, H3, and H4) form an octamer, around which approximately 146 bp of DNA is wrapped in repeating units, called nucleosomes. The linker histone, H1, interacts with linker DNA between nucleosomes and functions in the compaction of chromatin into higher order

chromosome 6p21.33. [provided by RefSeq, Aug 2015]

structures. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H2B family. Transcripts from this gene lack polyA tails but instead contain a palindromic termination element. This gene is found in the histone microcluster on
