Gene Name:	vezatin, adherens junctions transmembrane protein
Database Link:	Entrez Gene 55591 Human Q9HBM0
Background:	This gene encodes a transmembrane protein which has been localized to adherens junctions and shown to bind to myosin VIIA. Examination of expression of this gene in gastric cancer tissues have shown that expression is decreased which appears to be related to hypermethylation of the promoter. Expression of this gene may also be inhibited by binding of a specific microRNA to a target sequence in the 3' UTR of the transcripts. A pseudogene of this gene is located on the X chromosome. Alternative splicing results in multiple transcript variants.
Synonyms:	DKFZP761C241; VEZATIN
