**Gene Name:** vezatin, adherens junctions transmembrane protein

**Database Link:** Entrez Gene 55591 Human

**Q9HBM0** 

**Background:** This gene encodes a transmembrane protein which has been localized to adherens junctions

and shown to bind to myosin VIIA. Examination of expression of this gene in gastric cancer

tissues have shown that expression is decreased which appears to be related to

hypermethylation of the promoter. Expression of this gene may also be inhibited by binding of a specific microRNA to a target sequence in the 3' UTR of the transcripts. A pseudogene of this gene is located on the X chromosome. Alternative splicing results in multiple transcript

variants.

Synonyms: DKFZP761C241; VEZATIN
