

Product datasheet for TA372239S

CIITA Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies Applications: IHC Recommended Dilution: IHC: 25-100 Positive control: Human brain Predicted cell location: Cytoplasm **Reactivity:** Human, Mouse Host: Rabbit Isotype: lgG **Clonality:** Polyclonal Immunogen: Synthetic peptide of human CIITA Formulation: pH7.4 PBS, 0.05% NaN3, 40% Glycerol **Concentration:** lot specific Antigen affinity purification Purification: **Conjugation:** Unconjugated Storage: Store at -20°C. Stability: 1 year Gene Name: class II, major histocompatibility complex, transactivator Database Link: Entrez Gene 4261 Human P33076

GRIGENE CIITA Rabbit Polyclonal Antibody – TA372239S

Background: This gene encodes a protein with an acidic transcriptional activation domain, 4 LRRs (leucinerich repeats) and a GTP binding domain. The protein is located in the nucleus and acts as a positive regulator of class II major histocompatibility complex gene transcription, and is referred to as the master control factor for the expression of these genes. The protein also binds GTP and uses GTP binding to facilitate its own transport into the nucleus. Once in the nucleus it does not bind DNA but rather uses an intrinsic acetyltransferase (AT) activity to act in a coactivator-like fashion. Mutations in this gene have been associated with bare lymphocyte syndrome type II (also known as hereditary MHC class II deficiency or HLA class II-deficient combined immunodeficiency), increased susceptibility to rheumatoid arthritis, multiple sclerosis and possibly myocardial infarction. Several transcript variants encoding different isoforms have been found for this gene.

Synonyms:

C2TA; CIITAIV; MHC2TA; NLRA
