

Product datasheet for TA372392

DAGLA Rabbit Polyclonal Antibody

Product data:

Host:

Product Type: Primary Antibodies IHC **Applications:** IHC: 25-100 Recommended Dilution: Positive control: Human liver cancer Predicted cell location: Cytoplasm or Nucleus **Reactivity:** Human, Mouse, Rat Rabbit Isotype: lgG **Clonality:** Polyclonal Immunogen: Synthetic peptide of human DAGLA Formulation: pH7.4 PBS, 0.05% NaN3, 40% Glycerol **Concentration:** lot specific Purification: Antigen affinity purification **Conjugation:** Unconjugated Store at -20°C. Storage: Stability: 1 year Gene Name: diacylglycerol lipase alpha Database Link: Entrez Gene 747 Human Q9Y4D2 Background: Members of the AB hydrolase superfamily have diverse catalytic functions and play a crucial role in the metabolism of lipids. DAGLα (diacylglycerol lipase alpha), also known as NSDDR or C11orf11, is a 1,042 amino acid multi-pass membrane protein that belongs to the AB hydrolase superfamily. Highly expressed in brain and pancreas, DAGLa uses calcium as a cofactor to catalyze the hydrolysis of diacylglycerol (DAG) to 2-arachidonoyl-glycerol (2-AG), a reaction that is required for axonal growth and for retrograde synaptic signaling at mature synapses. DAGL α functions as at optimal pH of 7 and its activity is inhibited by p-hydroxy-

mercuri-benzoate and HgCl2. The gene encoding DAGLa maps to human chromosome 11,

which houses over 1,400 genes and comprises nearly 4% of the human genome.
