MR3 (ADGRE3) Rabbit Polyclonal Antibody – TA372471S

Background:This gene encodes a member of the class B seven-span transmembrane (TM7) receptor
family expressed predominantly by cells of the immune system. Family members are
characterized by an extended extracellular region with a variable number of N-terminal
epidermal growth factor (EGF)-like domains coupled to a TM7 domain via a mucin-like spacer
domain. This gene is closely linked to the gene encoding egf-like molecule containing mucin-
like hormone receptor 2 on chromosome 19. This protein may play a role in myeloid-myeloid
interactions during immune and inflammatory responses. Alternative splicing results in
multiple transcript variants encoding different isoforms.
