#### **GRIGENE** ABCG5 Rabbit Polyclonal Antibody – TA373152S

Background:The protein encoded by this gene is a member of the superfamily of ATP-binding cassette<br/>(ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular<br/>membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP,<br/>ALD, OABP, GCN20, White). This protein is a member of the White subfamily. The protein<br/>encoded by this gene functions as a half-transporter to limit intestinal absorption and<br/>promote biliary excretion of sterols. It is expressed in a tissue-specific manner in the liver,<br/>colon, and intestine. This gene is tandemly arrayed on chromosome 2, in a head-to-head<br/>orientation with family member ABCG8. Mutations in this gene may contribute to sterol<br/>accumulation and atheroschlerosis, and have been observed in patients with sitosterolemia.

Synonyms: Sterolin-1; STSL
