#### **GRIGENE** ADAMTS1 Rabbit Polyclonal Antibody – TA373265S

Background:This gene encodes a member of the ADAMTS (a disintegrin and metalloproteinase with<br/>thrombospondin motif) protein family. Members of the family share several distinct protein<br/>modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like<br/>domain, and a thrombospondin type 1 (TS) motif. Individual members of this family differ in<br/>the number of C-terminal TS motifs, and some have unique C-terminal domains. The protein<br/>encoded by this gene contains two disintegrin loops and three C-terminal TS motifs and has<br/>anti-angiogenic activity. The expression of this gene may be associated with various<br/>inflammatory processes as well as development of cancer cachexia. This gene is likely to be<br/>necessary for normal growth, fertility, and organ morphology and function.

Synonyms:

ADAM-TS1; ADAMTS-1; C3-C5; KIAA1346; METH-1; METH1
