GRIGENE ARF1 Rabbit Polyclonal Antibody – TA373636

ARF1

Background:ADP-ribosylation factor 1 (ARF1) is a member of the human ARF gene family. The family
members encode small guanine nucleotide-binding proteins that stimulate the ADP-
ribosyltransferase activity of cholera toxin and play a role in vesicular trafficking as activators
of phospholipase D. The gene products, including 6 ARF proteins and 11 ARF-like proteins,
constitute a family of the RAS superfamily. The ARF proteins are categorized as class I (ARF1,
ARF2 and ARF3), class II (ARF4 and ARF5) and class III (ARF6), and members of each class
share a common gene organization. The ARF1 protein is localized to the Golgi apparatus and
has a central role in intra-Golgi transport. Multiple alternatively spliced transcript variants
encoding the same protein have been found for this gene.
