| Background:             | The protein encoded by this gene is a member of the ankyrin repeat and SOCS box-<br>containing (ASB) family of proteins. They contain ankyrin repeat sequence and a SOCS box<br>domain. The SOCS box serves to couple suppressor of cytokine signalling (SOCS) proteins<br>and their binding partners with the elongin B and C complex, possibly targeting them for<br>degradation. Multiple alternatively spliced transcript variants, both protein-coding and not<br>protein-coding, have been described for this gene. |
