#### Sialoglycoprotein Receptor 1 (ASGR1) Rabbit Polyclonal Antibody – TA373734S

Background:This gene encodes a subunit of the asialoglycoprotein receptor. This receptor is a<br/>transmembrane protein that plays a critical role in serum glycoprotein homeostasis by<br/>mediating the endocytosis and lysosomal degradation of glycoproteins with exposed terminal<br/>galactose or N-acetylgalactosamine residues. The asialoglycoprotein receptor may facilitate<br/>hepatic infection by multiple viruses including hepatitis B, and is also a target for liver-specific<br/>drug delivery. The asialoglycoprotein receptor is a hetero-oligomeric protein composed of<br/>major and minor subunits, which are encoded by different genes. The protein encoded by<br/>this gene is the more abundant major subunit. Alternatively spliced transcript variants<br/>encoding multiple isoforms have been observed for this gene.

Synonyms:

ASGPR; CLEC4H1
