### **BSCL2** Rabbit Polyclonal Antibody – TA374092S

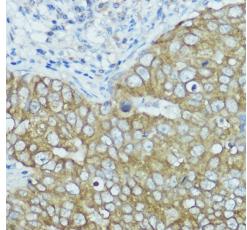

Background:This gene encodes the multi-pass transmembrane protein protein seipin. This protein<br/>localizes to the endoplasmic reticulum and may be important for lipid droplet morphology.<br/>Mutations in this gene have been associated with congenital generalized lipodystrophy type 2<br/>or Berardinelli-Seip syndrome, a rare autosomal recessive disease characterized by a near<br/>absence of adipose tissue and severe insulin resistance. Alternatively spliced transcript<br/>variants encoding different isoforms have been found for this gene. Naturally occurring read-<br/>through transcription occurs between this locus and the neighboring locus HNRNPUL2<br/>(heterogeneous nuclear ribonucleoprotein U-like 2).

#### Synonyms: GNG3LG; HMN5; MGC4694; OTTHUMP00000198007; seipin; SPG17
