#### **GRIGENE** CACNA1E Rabbit Polyclonal Antibody – TA374187S

Background:Voltage-dependent calcium channels are multisubunit complexes consisting of alpha-1, alpha-<br/>2, beta, and delta subunits in a 1:1:1:1 ratio. These channels mediate the entry of calcium<br/>ions into excitable cells, and are also involved in a variety of calcium-dependent processes,<br/>including muscle contraction, hormone or neurotransmitter release, gene expression, cell<br/>motility, cell division and cell death. This gene encodes the alpha-1E subunit of the R-type<br/>calcium channels, which belong to the 'high-voltage activated' group that maybe involved in<br/>the modulation of firing patterns of neurons important for information processing.<br/>Alternatively spliced transcript variants encoding different isoforms have been described for<br/>this gene.

Synonyms: BII; CACH6; CACNL1A6; Cav2.3
