# Image: Section CCL11) Rabbit Polyclonal Antibody - TA374351Background:This antimicrobial gene is one of several chemokine genes clustered on the q-arm of<br/>chromosome 17. Chemokines form a superfamily of secreted proteins involved in<br/>immunoregulatory and inflammatory processes. The superfamily is divided into four<br/>subfamilies based on the arrangement of the N-terminal cysteine residues of the mature<br/>peptide. This chemokine, a member of the CC subfamily, displays chemotactic activity for<br/>eosinophils, but not mononuclear cells or neutrophils. This eosinophil-specific chemokine is<br/>thought to be involved in eosinophilic inflammatory diseases such as atopic dermatitis,<br/>allergic rhinitis, asthma and parasitic infections.

Synonyms: eotaxin; eotaxin-1; MGC22554; SCYA11
