#### **GRIGENE** Cyclin D2 (CCND2) Rabbit Polyclonal Antibody – TA374379S

Background:The protein encoded by this gene belongs to the highly conserved cyclin family, whose<br/>members are characterized by a dramatic periodicity in protein abundance through the cell<br/>cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct<br/>expression and degradation patterns which contribute to the temporal coordination of each<br/>mitotic event. This cyclin forms a complex with CDK4 or CDK6 and functions as a regulatory<br/>subunit of the complex, whose activity is required for cell cycle G1/S transition. This protein<br/>has been shown to interact with and be involved in the phosphorylation of tumor suppressor<br/>protein Rb. Knockout studies of the homologous gene in mouse suggest the essential roles of<br/>this gene in ovarian granulosa and germ cell proliferation. High level expression of this gene<br/>was observed in ovarian and testicular tumors. Mutations in this gene are associated with<br/>megalencephaly-polymicrogyria-polydactyly-hydrocephalus syndrome 3 (MPPH3).
