Background: The protein encoded by this gene belongs to the G-protein-coupled receptor family. It is a

> receptor for the CC chemokine - MIP-1, RANTES, TARC and MCP-1. Chemokines are a group of small polypeptide, structurally related molecules that regulate cell trafficking of various types of leukocytes. The chemokines also play fundamental roles in the development, homeostasis, and function of the immune system, and they have effects on cells of the central nervous

system as well as on endothelial cells involved in angiogenesis or angiostasis.
