### **CD38** Rabbit Polyclonal Antibody – TA374448S

T10

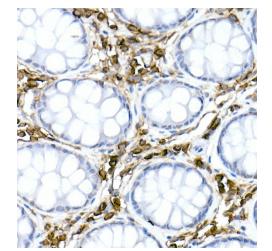

Background:The protein encoded by this gene is a non-lineage-restricted, type II transmembrane<br/>glycoprotein that synthesizes and hydrolyzes cyclic adenosine 5'-diphosphate-ribose, an<br/>intracellular calcium ion mobilizing messenger. The release of soluble protein and the ability<br/>of membrane-bound protein to become internalized indicate both extracellular and<br/>intracellular functions for the protein. This protein has an N-terminal cytoplasmic tail, a single<br/>membrane-spanning domain, and a C-terminal extracellular region with four N-glycosylation<br/>sites. Crystal structure analysis demonstrates that the functional molecule is a dimer, with the<br/>central portion containing the catalytic site. It is used as a prognostic marker for patients with<br/>chronic lymphocytic leukemia. Alternative splicing results in multiple transcript variants.
