#### **CD46** Rabbit Polyclonal Antibody – TA374462

Background:The protein encoded by this gene is a type I membrane protein and is a regulatory part of the<br/>complement system. The encoded protein has cofactor activity for inactivation of<br/>complement components C3b and C4b by serum factor I, which protects the host cell from<br/>damage by complement. In addition, the encoded protein can act as a receptor for the<br/>Edmonston strain of measles virus, human herpesvirus-6, and type IV pili of pathogenic<br/>Neisseria. Finally, the protein encoded by this gene may be involved in the fusion of the<br/>spermatozoa with the oocyte during fertilization. Mutations at this locus have been<br/>associated with susceptibility to hemolytic uremic syndrome. Alternatively spliced transcript<br/>variants encoding different isoforms have been described.

Synonyms: AHUS2; MCP; MGC26544; MIC10; TLX; TRA2.10
