# CRIGENE Dectin 1 (CLEC7A) Rabbit Polyclonal Antibody – TA374873S

Background:This gene encodes a member of the C-type lectin/C-type lectin-like domain (CTL/CTLD)<br/>superfamily. The encoded glycoprotein is a small type II membrane receptor with an<br/>extracellular C-type lectin-like domain fold and a cytoplasmic domain with an<br/>immunoreceptor tyrosine-based activation motif. It functions as a pattern-recognition<br/>receptor that recognizes a variety of beta-1,3-linked and beta-1,6-linked glucans from fungi<br/>and plants, and in this way plays a role in innate immune response. Alternate transcriptional<br/>splice variants, encoding different isoforms, have been characterized. This gene is closely<br/>linked to other CTL/CTLD superfamily members on chromosome 12p13 in the natural killer<br/>gene complex region.

Synonyms:

BGR; CANDF4; CLECSF12; dectin-1; DECTIN1; hDectin-1
