GRIGENE Cystatin F (CST7) Rabbit Polyclonal Antibody – TA375170

Background:The cystatin superfamily encompasses proteins that contain multiple cystatin-like sequences.
Some of the members are active cysteine protease inhibitors, while others have lost or
perhaps never acquired this inhibitory activity. There are three inhibitory families in the
superfamily, including the type 1 cystatins (stefins), type 2 cystatins and the kininogens. The
type 2 cystatin proteins are a class of cysteine proteinase inhibitors found in a variety of
human fluids and secretions. This gene encodes a glycosylated cysteine protease inhibitor
with a putative role in immune regulation through inhibition of a unique target in the
hematopoietic system. Expression of the protein has been observed in various human cancer
cell lines established from malignant tumors.

Synonyms: CMAP; cystatin-7; cystatin-F; Leukocystatin
