Background: The protein encoded by this gene is a lysosomal cysteine proteinase and member of the

peptidase C1 family. It exhibits both carboxy-monopeptidase and carboxy-dipeptidase activities. The encoded protein has also been known as cathepsin X and cathepsin P. This gene is expressed ubiquitously in cancer cell lines and primary tumors and, like other

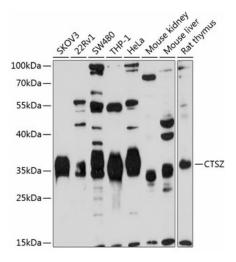

members of this family, may be involved in tumorigenesis.

Synonyms: CTSX; FLJ17088
