Background: This gene encodes a member of the cytochrome P450 superfamily of enzymes and is located

within a cluster of genes belonging to this superfamily on chromosome 1. The cytochrome

P450 proteins are monooxygenases which catalyze many reactions involved in drug

metabolism and synthesis of cholesterol, steroids and other lipids. The expression pattern of a similar rat protein suggests that this protein may be involved in neurovascular function in the brain. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb
