#### **DDIT4** Rabbit Polyclonal Antibody – TA375374S

Background:Regulates cell growth, proliferation and survival via inhibition of the activity of the<br/>mammalian target of rapamycin complex 1 (mTORC1. Inhibition of mTORC1 is mediated by a<br/>pathway that involves DDIT4/REDD1, AKT1, the TSC1-TSC2 complex and the GTPase RHEB.<br/>Plays an important role in responses to cellular energy levels and cellular stress, including<br/>responses to hypoxia and DNA damage. Regulates p53/TP53-mediated apoptosis in response<br/>to DNA damage via its effect on mTORC1 activity. Its role in the response to hypoxia depends<br/>on the cell type; it mediates mTORC1 inhibition in fibroblasts and thymocytes, but not in<br/>hepatocytes (By similarity. Required for mTORC1-mediated defense against viral protein<br/>synthesis and virus replication (By similarity. Inhibits neuronal differentiation and neurite<br/>outgrowth mediated by NGF via its effect on mTORC1 activity. Required for normal neuron<br/>migration during embryonic brain development. Plays a role in neuronal cell death.

Synonyms:

Dig2; FLJ20500; REDD-1; REDD1; RP11-442H21.1; RTP801
