#### **DDX41** Rabbit Polyclonal Antibody – TA375396

Background:DEAD box proteins, characterized by the conserved motif Asp-Glu-Ala-Asp (DEAD), are<br/>putative RNA helicases. They are implicated in a number of cellular processes involving<br/>alteration of RNA secondary structure, such as translation initiation, nuclear and<br/>mitochondrial splicing, and ribosome and spliceosome assembly. Based on their distribution<br/>patterns, some members of the DEAD box protein family are believed to be involved in<br/>embryogenesis, spermatogenesis, and cellular growth and division. The protein encoded by<br/>this gene is a member of the DEAD box protein family and interacts with several spliceosomal<br/>proteins. In addition, the encoded protein may recognize the bacterial second messengers<br/>cyclic di-GMP and cyclic di-AMP, resulting in the induction of genes involved in the innate<br/>immune response.
