#### **DDX5** Rabbit Polyclonal Antibody – TA375401

Background:DEAD box proteins, characterized by the conserved motif Asp-Glu-Ala-Asp (DEAD), are<br/>putative RNA helicases. They are implicated in a number of cellular processes involving<br/>alteration of RNA secondary structure, such as translation initiation, nuclear and<br/>mitochondrial splicing, and ribosome and spliceosome assembly. Based on their distribution<br/>patterns, some members of this family are believed to be involved in embryogenesis,<br/>spermatogenesis, and cellular growth and division. This gene encodes a DEAD box protein,<br/>which is a RNA-dependent ATPase, and also a proliferation-associated nuclear antigen,<br/>specifically reacting with the simian virus 40 tumor antigen. Alternative splicing results in<br/>multiple transcript variants.
