GRIGENE DNase I (DNASE1) Rabbit Polyclonal Antibody – TA375544

Background:This gene encodes a member of the DNase family. This protein is stored in the zymogen
granules of the nuclear envelope and functions by cleaving DNA in an endonucleolytic
manner. At least six autosomal codominant alleles have been characterized, DNASE1*1
through DNASE1*6, and the sequence of DNASE1*2 represented in this record. Mutations in
this gene have been associated with systemic lupus erythematosus (SLE), an autoimmune
disease. A recombinant form of this protein is used to treat the one of the symptoms of cystic
fibrosis by hydrolyzing the extracellular DNA in sputum and reducing its viscosity. Alternate
transcriptional splice variants of this gene have been observed but have not been thoroughly
characterized.

Synonyms: DKFZp686H0155; DNL1; DRNI; FLJ38093; FLJ44902
