ORIGENE DNER Rabbit Polyclonal Antibody – TA375549S

Background:DNER (Delta/Notch-like EGF-related receptor), also known as BET (brain-specific EGF-like
transmembrane protein), is a type I transmembrane glycoprotein of the Notch/Delta family .
In the mouse, DNER has been detected as 90, 120 and 150 kDa forms which are probably
variably glycosylated .Activator of the NOTCH1 pathway. May mediate neuron-glia interaction
during astrocytogenesis.DNER associates with protein tyrosine phosphatase zeta (PTP zeta),
which is the receptor of pleiotrophin (PTN). PTP zeta -PTN-DNER signaling has been
implicated in the regulation of neuritogenesis. Expression of DNER in glioblastoma stem-like
cells inhibits formation of neurospheres in vitro, while in vivo it induces differentiation and
inhibits growth of xenografts, thus acting as a tumor suppressor.
