Database Link: <u>Entrez Gene 8721 Human</u>

<u>O60869</u>

Background: This gene encodes a protein that may regulate endothelial cell differentiation, lipid

metabolism, and hormone-induced cardiomyocyte hypertrophy. The encoded protein has also been found to act as a transcriptional coactivator by interconnecting the general transcription factor TATA element-binding protein (TBP) and gene-specific activators.

Alternate splicing results in multiple transcript variants.
