#### **GRIGENE** FADS2 Rabbit Polyclonal Antibody – TA376079

Background:The protein encoded by this gene is a member of the fatty acid desaturase (FADS) gene<br/>family. Desaturase enzymes regulate unsaturation of fatty acids through the introduction of<br/>double bonds between defined carbons of the fatty acyl chain. FADS family members are<br/>considered fusion products composed of an N-terminal cytochrome b5-like domain and a C-<br/>terminal multiple membrane-spanning desaturase portion, both of which are characterized<br/>by conserved histidine motifs. This gene is clustered with family members at 11q12-q13.1;<br/>this cluster is thought to have arisen evolutionarily from gene duplication based on its similar<br/>exon/intron organization. Alternative splicing results in multiple transcript variants encoding<br/>different isoforms.

Synonyms:

D6D; delta-6-desaturase; DES6; FADSD6; LLCDL2; SLL0262; TU13
