#### **GRIGENE** FAU Rabbit Polyclonal Antibody – TA376138S

Background:This gene is the cellular homolog of the fox sequence in the Finkel-Biskis-Reilly murine<br/>sarcoma virus (FBR-MuSV). It encodes a fusion protein consisting of the ubiquitin-like protein<br/>fubi at the N terminus and ribosomal protein S30 at the C terminus. It has been proposed<br/>that the fusion protein is post-translationally processed to generate free fubi and free<br/>ribosomal protein S30. Fubi is a member of the ubiquitin family, and ribosomal protein S30<br/>belongs to the S30E family of ribosomal proteins. Whereas the function of fubi is currently<br/>unknown, ribosomal protein S30 is a component of the 40S subunit of the cytoplasmic<br/>ribosome and displays antimicrobial activity. Pseudogenes derived from this gene are present<br/>in the genome. Similar to ribosomal protein S30, ribosomal proteins S27a and L40 are<br/>synthesized as fusion proteins with ubiquitin.
