Background: The protein encoded by this gene belongs to the albumin gene family. It is a multifunctional

protein found in plasma, ascitic fluid, cerebrospinal fluid and on the surface of many cell types. It binds to vitamin D and its plasma metabolites and transports them to target tissues. Alternatively spliced transcript variants encoding different isoforms have been found for this

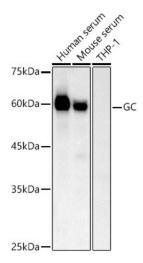

gene.

Synonyms: DBP; DBP/GC; Gc-globulin; GRD3; hDBP; VDB; VDBG; VDBP
