# Product datasheet for TA376669S

## **GNRH2 Rabbit Polyclonal Antibody**

## **Product data:**

| Product Type:           | Primary Antibodies   |
|-------------------------|--|
| Applications:           | ELISA, WB  |
| Recommended Dilution:   | WB,1:500 - 1:2000 ELISA,Recommended starting concentration is 1 $\mu$ g/mL. Please optimize the concentration based on your specific assay requirements. |
| Reactivity:             | Human, Mouse, Rat  |
| Modifications:          | Unmodified   |
| Host:                   | Rabbit   |
| lsotype:                | IgG  |
| Clonality:              | Polyclonal   |
| Formulation:            | Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.  |
| Concentration:          | lot specific   |
| Purification:           | Affinity purification  |
| Conjugation:            | Unconjugated   |
| Storage:                | Store at -20°C. Avoid freeze / thaw cycles.  |
| Stability:              | Shelf life: one year from despatch.  |
| Predicted Protein Size: | 13kDa  |
| Gene Name:              | gonadotropin releasing hormone 2   |
| Database Link:          | <u>Entrez Gene 2797 Human</u><br><u>O43555</u>   |

#### **GNRH2** Rabbit Polyclonal Antibody – TA376669S

Background:This gene is a member of the gonadotropin-releasing hormone (GnRH) gene family. Proteins<br/>encoded by members of this gene family are proteolytically cleaved to form neuropeptides<br/>which, in part, regulate reproductive functions by stimulating the production and release of<br/>the gonadotropins follicle-stimulating hormone (FSH) and luteinizing hormone (LH). The<br/>human GNRH2 gene is predicted to encode a preproprotein from which a mature<br/>neuropeptide of 10 amino acids is cleaved. However, while the human GNRH2 gene has<br/>not yet been demonstrated and the GNRH2 gene of chimpanzees, gorilla, and Sumatran<br/>orangutan have a premature stop at codon eight of the decapeptide sequence which<br/>suggests GNRH2 was a pseudogene in the hominid lineage. The GNRH2 gene is also believed<br/>to be a pseudogene in many other mammalian species such as mouse and cow. The receptor<br/>for this gene (GNRHR2) is predicted to be a pseudogene in human as well as many other<br/>mammalian species. The closely related GNRH1 and GNRHR1 genes are functional in human<br/>and other mammals and are generally functional in vertebrates.

Synonyms: GnRH-II; LH-RHII; OTTHUMP00000030076; OTTHUMP00000030077
