Gene Name: hyaluronan synthase 3 Database Link: Entrez Gene 3038 Human

000219

Background: The protein encoded by this gene is involved in the synthesis of the unbranched

> glycosaminoglycan hyaluronan, or hyaluronic acid, which is a major constituent of the extracellular matrix. This gene is a member of the NODC/HAS gene family. Compared to the proteins encoded by other members of this gene family, this protein appears to be more of a regulator of hyaluronan synthesis. Alternative splicing results in multiple transcript variants.
