

Product datasheet for TA377111

HLA-DQB1 Rabbit Polyclonal Antibody

Recommended Dilution: WB,1:500 - 1:2000

Primary Antibodies

IHC,1:50 - 1:200

IHC, WB

Human

Rabbit IgG

Polyclonal

lot specific

29kDa

P01920

Affinity purification

Unconjugated

Recombinant protein of human HLA-DQB1.

Store at -20°C. Avoid freeze / thaw cycles.

major histocompatibility complex, class II, DQ beta 1

Shelf life: one year from despatch.

Entrez Gene 3119 Human

Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.

Unmodified

GRIGENE HLA-DQB1 Rabbit Polyclonal Antibody – TA377111

Background: HLA-DQB1 belongs to the HLA class II beta chain paralogs. This class II molecule is a heterodimer consisting of an alpha (DQA) and a beta chain (DQB), both anchored in the membrane. It plays a central role in the immune system by presenting peptides derived from extracellular proteins. Class II molecules are expressed in antigen presenting cells (APC: B lymphocytes, dendritic cells, macrophages). The beta chain is approximately 26-28 kDa and it contains six exons. Exon 1 encodes the leader peptide, exons 2 and 3 encode the two extracellular domains, exon 4 encodes the transmembrane domain and exon 5 encodes the cytoplasmic tail. Within the DQ molecule both the alpha chain and the beta chain contain the polymorphisms specifying the peptide binding specificities, resulting in up to four different molecules. Typing for these polymorphisms is routinely done for bone marrow transplantation. Alternative splicing results in multiple transcript variants.

Synonyms: CELIAC1; HLA-DQB; IDDM1
