**Background:** Bruton tyrosine kinase (BTK) is a protein tyrosine kinase that is expressed in B cells,

macrophages, and neutrophils. The protein encoded by this gene binds to BTK and

downregulates BTK's kinase activity. In addition, the encoded protein disrupts BTK-mediated calcium mobilization and negatively regulates the activation of nuclear factor-kappa-B-driven transcription. This gene has a pseudogene on chromosome 18. Alternative splicing results in

multiple transcript variants encoding distinct isoforms.

**Synonyms:** BTKI; DKFZP564B116; KIAA1417; MGC142256; MGC142258; RP1-93K22.1
