Background: The protein encoded by this gene is a member of the intercellular adhesion molecule (ICAM)

family. All ICAM proteins are type I transmembrane glycoproteins, contain 2-9

immunoglobulin-like C2-type domains, and bind to the leukocyte adhesion LFA-1 protein. This

protein may play a role in lymphocyte recirculation by blocking LFA-1-dependent cell

adhesion. It mediates adhesive interactions important for antigen-specific immune response,

NK-cell mediated clearance, lymphocyte recirculation, and other cellular interactions

important for immune response and surveillance. Several transcript variants encoding the

same protein have been found for this gene.
