	ITLN1 Rabbit Polyclonal Antibody – TA377622S
Background:	Intelectin-1(ITLN1) is a secreted protein and contains 1 fibrinogen C-terminal domain. Intelectin-1 is a 40 kDaCa-dependent galactofuranose-binding lectin that is not a C-type lectin. It is expressed on multiple cell typesand appears to participate in insulin signaling and microbe recognition. The protein has no effect on basalglucose uptake but enhances insulin- stimulated glucose uptake in adipocytes. It increases AKT phosphorylationin the absence and presence of insulin and it may play a role in the defense systemagainst microorganisms. Italso may specifically recognize carbohydrate chains of pathogens and bacterial components containinggalactofuranosy l residues, in a calcium-dependent manner.
Synonyms:	FLJ20022; hIntL; HL-1; HL1; intelectin; INTL; ITLN; ITLN-1; LFR; omentin
