#### CRIGENE TAK1 (MAP3K7) Rabbit Polyclonal Antibody – TA378277S

Background:The protein encoded by this gene is a member of the serine/threonine protein kinase family.<br/>This kinase mediates the signaling transduction induced by TGF beta and morphogenetic<br/>protein (BMP), and controls a variety of cell functions including transcription regulation and<br/>apoptosis. In response to IL-1, this protein forms a kinase complex including TRAF6,<br/>MAP3K7P1/TAB1 and MAP3K7P2/TAB2; this complex is required for the activation of nuclear<br/>factor kappa B. This kinase can also activate MAPK8/JNK, MAP2K4/MKK4, and thus plays a<br/>role in the cell response to environmental stresses. Four alternatively spliced transcript<br/>variants encoding distinct isoforms have been reported.

Synonyms: MEKK7; TAK1; TGF1a
