#### **GRIGENE** MMP13 Rabbit Polyclonal Antibody – TA378578

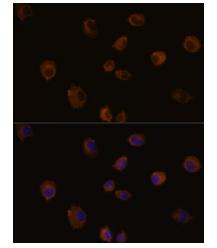

Background:This gene encodes a member of the peptidase M10 family of matrix metalloproteinases<br/>(MMPs). Proteins in this family are involved in the breakdown of extracellular matrix in<br/>normal physiological processes, such as embryonic development, reproduction, and tissue<br/>remodeling, as well as in disease processes, such as arthritis and metastasis. The encoded<br/>preproprotein is proteolytically processed to generate the mature protease. This protease<br/>cleaves type II collagen more efficiently than types I and III. It may be involved in articular<br/>cartilage turnover and cartilage pathophysiology associated with osteoarthritis. Mutations in<br/>this gene are associated with metaphyseal anadysplasia. This gene is part of a cluster of MMP<br/>genes on chromosome 11.

Synonyms: CLG3; MANDP1; MMP-13
