### **GRIGENE** Mesothelin (MSLN) Rabbit Polyclonal Antibody – TA378700S

# Background:This gene encodes a preproprotein that is proteolytically processed to generate two protein<br/>products, megakaryocyte potentiating factor and mesothelin. Megakaryocyte potentiating<br/>factor functions as a cytokine that can stimulate colony formation of bone marrow<br/>megakaryocytes. Mesothelin is a glycosylphosphatidylinositol-anchored cell-surface protein<br/>that may function as a cell adhesion protein. This protein is overexpressed in epithelial<br/>mesotheliomas, ovarian cancers and in specific squamous cell carcinomas. Alternative<br/>splicing results in multiple transcript variants, at least one of which encodes an isoform that is<br/>proteolytically processed.

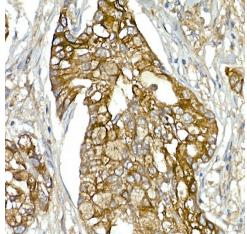

### Synonyms:

CAK1; mesothelin; MPF; SMR
