## **MTHFD2** Rabbit Polyclonal Antibody – TA378748

#### Background:

This gene encodes a nuclear-encoded mitochondrial bifunctional enzyme with methylenetetrahydrofolate dehydrogenase and methenyltetrahydrofolate cyclohydrolase activities. The enzyme functions as a homodimer and is unique in its absolute requirement for magnesium and inorganic phosphate. Formation of the enzyme-magnesium complex allows binding of NAD. Alternative splicing results in two different transcripts, one proteincoding and the other not protein-coding. This gene has a pseudogene on chromosome 7.

#### Synonyms:

NMDMC
