GRIGENE c-Myc (MYC) Rabbit Polyclonal Antibody – TA378818

Background:The protein encoded by this gene is a multifunctional, nuclear phosphoprotein that plays a
role in cell cycle progression, apoptosis and cellular transformation. It functions as a
transcription factor that regulates transcription of specific target genes. Mutations,
overexpression, rearrangement and translocation of this gene have been associated with a
variety of hematopoietic tumors, leukemias and lymphomas, including Burkitt lymphoma.
There is evidence to show that alternative translation initiations from an upstream, in-frame
non-AUG (CUG) and a downstream AUG start site result in the production of two isoforms
with distinct N-termini. The synthesis of non-AUG initiated protein is suppressed in Burkitt's
lymphomas, suggesting its importance in the normal function of this gene.

Synonyms: bHLHe39; c-Myc; MRTL
